Current Environment for Retail IT Functions

Retail has always moved rapidly with constant new store adds, location changes, and even store closings. Now with Covid-19, the sheer volume of change, the speed required for that unplanned change, coupled with reduced IT store management staff all combine to equal the need for help!

Our Value and Design Approach

DecisionPoint's customized strategies implement a streamlined, cost-effective approach from breaking down your technology estate to the reassignment of those assets. Each asset is unique, requiring flexibility with how you treat that asset. With that in mind, we will work closely with our clients to determine which asset requires what activity. The DPS design and implementation strategy for decommissioning of your retail store allow you to focus on other business opportunities and improvements.

- Decommissioning Project - Strategy layout
- Asset Management - Inventory and tracking
- Security - Removal of confidential/person data from assets
- Ship to client or DPS warehouse location - Inventory and package/ship

Implementation

DPS utilizes a nationwide team of professionals to execute on the below project steps with flawless Best-in-Class service. You will also have access to a personalized client portal for easy access to track actions associated with your project.

- Nationwide coverage
- Site readiness assessment
- Trained technicians on-site, certified and with background check
- Dispatch management
- Documentation and reporting
- Break down selected equipment as designated
- Security - Removal of confidential/person data from assets
- Pack and ship to client location as specified in the design phase

Asset Management

Physical asset tracking gives customers complete visibility into their entire technology estate. The age and remaining life of an asset can result in a different activity to ensure our clients achieve the best outcome for their organizations. During the decommission of a store, DPS will catalog model and serial information then ship the asset as determined by the client.

- Refurbish - Prepare equipment for future use
- Warehousing/Depot - Store equipment or spare program
- Brokerage - Creating cash from aging assets
- Dispose - Environmentally disposal

Project Management

Our PMP-certified Project Managers are the customer's single point of contact throughout the entire lifecycle of your decommission project.

- Coordinate project requirements with customer and vendors
- Manage and monitor vendor performance
- Risk management assessment
- Issue escalation and resolution
- Budget management
- Project schedule management
- Project close out and lessons learned
