

Painless Proof of Delivery Using MobileConductor™

✓
More than a MONTH of labor saved

✓
Streamline delivery invoice adjustments and corrections for a cleaner invoicing process.

Delivery management can be challenging if it's an unorganized manual process. Rising fuel costs alongside labor and driver shortages are just a few of the hurdles food distribution companies are up against. But choosing the right delivery management software doesn't have to be difficult. With MobileConductor™ you can streamline your operations by eliminating labor intensive back office processes and gain valuable insight into your deliveries with near real-time data. Your business can save time, improve driver performance, and reduce delivery errors with exceptional proof of delivery (POD) software, like MobileConductor™, paired with the right hardware options.

Proof of Delivery Management, Simplified

ExtenData can strengthen your business operations by reducing back-office costs and simplifying the delivery process while tracking last-mile delivery operations in near real-time. We have the right software, hardware, and support systems to manage the devices your business needs to be successful.

Must-Have Delivery Management Features

- ➔ **"Where's my truck?" Delivery Tracking**
- ➔ **"COVID Conscious" Signature Capture**
- ➔ **Actionable Management Alerts**
- ➔ **Last Mile Proof Needed for 2023**

MobileConductor™ is designed to deliver cost savings and capture valuable delivery data. With that data available at all levels of an organization, teams, such as accounting, upper management, transportation managers, drivers, warehouse staff, and customer service, have the opportunity and are intrinsically encouraged to collaborate for better and smarter decisions. **The power to transform your delivery operations is within reach.**

Exceptional Hardware for Industry-Leading Software

The Zebra TC57 scanner is a tried and tested option that works well in the field and can handle your drivers' workloads while performing dependably. There's also the TC26 and TC77 scanner, both of which are industry favorites. The Zebra ZQ511 printer is another field favorite for its economic size and consistent high-quality performance.

You need hardware that can withstand demanding warehouse and distribution center environments. Tools must survive hours of use, inclement weather, gloved users, and rough use. Additionally, according to a recent Zippia study, the No. 2 cause of U.S. supply chain disruptions is the loss of talent, reported by 51% of respondents. Failing tools would frustrate most drivers, so MobileConductor™ software is compatible with industry-leading hardware like devices from Zebra Technologies to provide the highest quality solutions.

ExtenData also has services to manage advanced deployment rollouts when your business needs a hardware upgrade. The hardware we work with helps combat labor shortages by providing your drivers to do more work with less troubleshooting. We also focus on hardware that has great connectivity options so that routes can be adjusted in real-time to avoid extra stops.

Delivery Management Software for Operations Visibility

MobileConductor™ is a premier delivery management software, perfect for food distribution delivery management needs like proof of delivery, last-mile delivery, and more. Like any other business, food distributors must invest and take care to stay competitive in their market. Customer experience is the ultimate factor allowing a business to keep existing and win new customers. It's a must have.
