Honeywell

Leading Voice Tools for Truck Inspection Software

▶ Inspection Issues

If you are using paper or a cumbersome handheld application for truck inspections, it can be difficult to get consistent results from each driver. Skipping steps or the inspection all together can open you to large losses of money, time and customer goodwill.

▶ Honeywell & DecisionPoint Voice Inspection Solutions

DecisionPoint has partnered with [Honeywell voice automated solutions](#) to streamline truck inspections. The voice-based solution provides you with inspections that are customized to your processes and requirements. Our solution talks the technician through the inspection process and asks specific questions that they respond to in a simple format, all while reducing inspection time. VoiceCheck's electronic data capture and predictive analytics eliminate manual data entry, automate downstream activities like creating parts and repairs orders, and forecasting parts replacements for drastically reduced 90-day comebacks and roadside breakdowns.

▶ DecisionPoint has the Professional Services You Need

DecisionPoint works closely with our customers to identify the proper workflows, and inspection process. That, combined with the right hardware, provides a complete solution for your needs. Our depot services help us configure and deploy the complete project, making it easy to implement a solution tailored to your fleet. **Ready to get started? [Contact us today!](#)**
